Welcome to KuralAI

KuralAI is an enterprise voice-AI platform built for Tamil-speaking customers. Meet **சமுத்ரா (Samuthra)** — an AI agent that places thousands of outbound calls a day, sounds completely human, and never sleeps.

What KuralAI does for you

▣ Mass outbound calling

Run campaigns of hundreds of concurrent calls — collections, reminders, follow-ups, surveys.

▣ Native Tamil voice

Neural TTS with natural prosody. Customers genuinely cannot tell it's an AI.

▣ Smart conversations

Intent detection, sentiment analysis, real-time transcripts, and context-aware replies.

▣ Full analytics

Per-call recordings, transcripts, dispositions, escalation tracking and CSV exports.

▣ Plug into your stack

Twilio & Exotel telephony, ElevenLabs & Sarvam.ai voice, REST API & CRM webhooks.

▣ Built multi-tenant

One platform, many organizations. Per-org branding, credits, plans & isolated data.

Three roles, three views

Role	Primary use	Sees
Viewer / Agent	Watch calls, look at reports	Dashboard, Calls, Customers, Reports
Organization Admin	Run campaigns, manage team & settings	Everything above + Users, Settings, Billing, API
Platform Super Admin	Run the platform itself	All organizations, plans, revenue, usage analytics

▣ First-time tip

If you're a brand-new organization, follow Chapter 02 → 04 → 05 in order: log in, add a customer, run your first campaign. You'll be live in under 10 minutes.

Logging in for the first time

Open your KuralAI URL — typically `https://kuralai.automystics.tech` or your organization's white-labelled domain.

Figure 2.1 — The KuralAI sign-in screen.

Step-by-step

- 1 **Enter your work email.** This is the address your administrator created your account with.
- 2 **Enter your password.** If your admin sent you a temporary password (e.g. `KuralAI@Welcome123`), use it now and change it immediately from *Settings* → *Profile*.
- 3 **Click "Sign in →".** You'll land on the dashboard suited to your role.

What you'll see based on your role

- **Viewer** → goes straight to *Dashboard*, sidebar shows tenant items only.
- **Admin** → *Dashboard* + a *System* section with Settings & Users.
- **Super Admin** → an extra *Platform* section at the top of the sidebar with Organizations, Plans, Revenue and Usage.

⚠ Lost your password?

Contact your organization admin — they can reset it for you from *Users* → *Reset password*.
Super-admin password resets must be done by Automystics support.

Dashboard — your live ops cockpit

The dashboard is where every shift begins. It rolls up volume, success rate, escalations and a live activity feed across the last 7 days.

Figure 3.1 — Tenant dashboard with KPIs, call-volume trend, intents and live activity.

What each tile means

Tile	Meaning	How it's calculated
Total Calls	All calls placed in the period	Outbound + inbound, regardless of outcome
Success Rate	% of calls that completed successfully	<code>completed / total</code>
Avg Duration	Mean talk time per connected call	Excludes no-answer / busy
Escalations	Calls handed off to a human	Triggered by your escalation rules
Failed Calls	No-answer, busy, error	Useful for retry decisions

Working the dashboard

- Use the **date selector** (top-right) to switch between Today, Last 7 days, This month, or a custom range.
- The **Live Activity** card streams events as they happen — *connect*, *intent detected*, *escalation*, *hang-up* — perfect for floor monitoring.
- Click any row in **Recent Calls** to jump straight to its full transcript and recording.
- The big green **+ New Call** button (top-right) opens the modal to dial a single number on the spot.

Customers — your contact directory

Everyone you call lives here. Customers can be imported in bulk, edited individually, grouped by chit/loan account, and dialled with one click.

Customers
4 total customers

Search by name, phone or address...

#	NAME	PHONE	CHIT INFO	ADDRESS	ADDED	ACTIONS
1	ஆனந்த் Has two active chit accounts.	+918056127734	CG-2024-B ₹3,00,000 Due: ₹11,250	T நகர், சென்னை	—	Call
2	கார்த்திக் High-value customer with 10L c...	+917358337470	CG-2024-C ₹10,00,000 Due: ₹37,500	அடையாறு, சென்னை	—	Call
3	சிவகுமார் Regular customer. Punctual wit...	+919042244200	CG-2024-A ₹5,00,000 Due: ₹18,750	அண்ணா நகர், சென்னை	—	Call
4	நவீன் Test customer for outbound cal...	+917339598110	Group-Test ₹50,000 Due: ₹2,500	—	—	Call

Figure 4.1 — Customer list showing Tamil names, chit account info, dues and one-click "Call".

The columns explained

- **Name** — full Tamil or English name shown alongside an avatar.
- **Phone** — E.164 format (e.g. `+91 80561 27734`).
- **Chit Info** — group code, contribution amount, current dues. Coloured pills make overdue accounts instantly visible.
- **Address** — used by the agent to confirm the right person on the line.
- **Actions** — Call, Edit, Delete.

Adding customers

- 1 Click **+ Add Customer** (top-right).
- 2 Fill in name, phone, optional chit/loan details and address.
- 3 Click **Save**. The contact is immediately available for campaigns and one-off dials.

▢ Bulk import

Have hundreds of contacts? Use the *+ Add Customer → Import CSV* option. The expected columns are `name, phone, address, chit_account, contribution, due`.

Campaigns — bulk outbound calling

Campaigns dial a list of customers concurrently using the engine, voice and template you choose. Progress, success rate and per-call status update live.

Figure 5.1 — Campaign list with engine, status, progress and concurrency.

Campaign lifecycle

- 1 **Click + New Campaign.** Give it a name and pick a *type* — Due Reminder, Collections, Follow-up, Survey, etc.
- 2 **Pick the engine:** *KuralAI Scripted* (deterministic), *ElevenLabs Conversational* (open-ended dialogue), or *Sarvam.ai* (Indic-tuned conversational).
- 3 **Pick the customer list** — entire directory, a saved segment, or upload a fresh CSV.
- 4 **Set concurrency** — how many calls to dial in parallel. Recommended: 3–10 for free tiers, 50+ for enterprise plans.

- 5 **Pick a script template** from your library (or write inline).
- 6 **Schedule:** *Start now* or pick a future window.
- 7 **Launch.** The progress bar advances as each call resolves.

What every column tells you

Column	What it means
Type	The campaign category — useful for filtering reports.
Engine	Which AI engine handled the dialogue.
Status	Draft, Running, Paused, Completed.
Progress	Calls done / total customers in the list.
Concurrency	How many lines were dialled simultaneously.

⚠ Watch your credits

Each connected call burns credits at the per-minute rate of your plan. If you run out mid-campaign, the platform pauses outgoing dials and emails the admin.

All Calls — history & recordings

Every call ever placed by your organization, paginated and filterable, with playback, transcript and export.

All Calls
144 total records

STATUS: All statuses | FROM: mm/dd/yyyy | TO: mm/dd/yyyy | Clear filters

← Previous | Page 1 of 6 | Next →

Figure 6.1 — All Calls page with status filter, date range and CSV export.

Filtering the list

- **Status:** All, Completed, In-Progress, Failed, No-Answer.
- **From / To:** any date range.
- **Search:** phone number, customer name or campaign.
- **Export CSV** (top-right) — exports the currently filtered set.

Inside a single call

Click **View** → on any row to open the call detail page. You'll find:

- ☐ The **recording** with a waveform and inline play/pause.
- ☐ The full **transcript** with speaker labels and timestamps.
- ☐ Detected **intents**, **sentiment** and **disposition**.
- ☐ Telephony metadata — provider call SID, duration, hang-up cause.
- ☐ A **Retry** button to re-dial the same number with the same script.

☐ **Compliance**

Recordings are stored in your configured storage backend (S3 or compatible). They never leave your account. Set the retention period in *Settings* → *Storage*.

Templates — reusable Tamil scripts

A template is the agent's playbook for a specific scenario — the opening line, fallback responses, escalation rules and closing. Build it once, reuse forever.

Figure 7.1 — Template library with categories and quick-edit.

Anatomy of a template

Section	Purpose
Greeting	The first sentence the agent speaks. Personalise with <code>{{customer.name}}</code> .
Verification	"Am I speaking with X?" — confirm the right person.
Main script	The core message — reminder, pitch, survey question.
Branches	What to say on Yes / No / "Call later" / wrong number.
Escalation	When to transfer to a human (angry tone, specific keywords).

Section	Purpose
Closing	Polite sign-off & thank you.

Variables you can use

```
{{customer.name}}      – full name
{{customer.first_name}} – first name
{{customer.due_amount}} – outstanding amount
{{customer.due_date}}   – due date
{{org.name}}            – your organization name
{{agent.name}}          – agent persona (e.g. "Samuthra")
```

Workflows — visual call flow builder

Workflows let you build branching call logic visually — "if customer says X, go to step Y; if escalation triggers, transfer to extension Z."

Figure 8.1 — Workflow editor.

Node types

- **Speak** — the agent says something (text or template variable).
- **Listen** — wait for a customer reply, with a timeout.
- **Branch** — route based on intent, sentiment, keyword or DTMF tone.
- **API call** — hit your CRM or custom endpoint mid-call.
- **Transfer** — hand off to a human agent or external number.
- **Hang up** — end the call gracefully.

□ **Test before going live**

Hit the *Simulate* button in the workflow editor to talk to your flow in a browser tab — no telephony cost.

Dynamic Call — single-shot calling

When you need to dial one number on the spot — to test a script, follow up on a single hot lead, or cover a manual escalation.

Figure 9.1 — Dynamic Call form.

Filling the form

- 1 **Phone** — full E.164 number (`+91 9XXXXXXXXX`).
- 2 **Customer name** (optional) — used inside the script.
- 3 **Engine** — KuralAI / ElevenLabs / Sarvam.ai.
- 4 **Template** — pick from your library or paste an inline prompt.
- 5 Click **Place Call**. The call lands within 2–5 seconds; the live transcript will stream into the panel below.

Simulate — test the agent in your browser

Validate templates, voices and workflows without touching the phone network. Free, instant, and great for QA.

TRY THESE QUESTIONS

- "ஆமா சார், நான் ஆனந்த்"
- "இன்னொரு சீட் எத்தனாவது due?"
- "இப்போ எடுத்தா எவ்வளவு அமெளன்ட்?"
- "jamin என்ன குடுக்கணும்?"

MORE SCENARIOS

- "ஆமா கலந்துக்கிறேன்" — lottery accept
- "மாசம் மாசம் கேக்குறங்க" — complaint
- "ஆஃபீஸ்ல இருந்து call பண்ணாதீங்க"
- "நன்றி சார்" — to end the call

Figure 10.1 — Browser-based agent simulator.

How to use

- 1 Pick the **engine** and **template** you want to test.

- 2 Allow microphone access when the browser prompts.
- 3 Click **Start Conversation** — the agent speaks the greeting.
- 4 Reply naturally; the transcript shows what the agent heard and said.
- 5 Click **End** when done. The session can be saved as a test fixture for regression checks.

CRM Integration — sync with your stack

Push call dispositions, transcripts and dispositions back into the CRM your agents already live in.

CRM Integration
Sync customer data and push call recordings to your chit fund CRM

[Configuration](#) [Fetch Customers](#) [Push Recordings](#)

CRM Fetch — Pull Customer Data Inbound

CRM Endpoint URL
The URL your CRM exposes to list customer data (e.g. `https://yourcrm.com/api/customers`)

`https://your-crm.com/api/customers`

HTTP Method
GET

Custom Headers (JSON)
e.g. `{"Authorization": "Bearer xxx"}`

`{"Authorization": "Bearer your-token"}`

CRM Push — Send Recordings & Transcripts Outbound

Push Endpoint URL
KuralAI will POST call recording URLs and transcripts to this endpoint

`https://your-crm.com/api/call-recordings`

Custom Headers (JSON)
`{"Authorization": "Bearer your-token"}`

[Save Configuration](#)

[Expected CRM Response Format](#) [Inbound Reference](#)

[Recording Push Payload](#) [Outbound Reference](#)

Figure 11.1 — CRM Integration page.

Supported integrations

- **Generic Webhook** — POST JSON of every call event to any URL you give us.
- **Zoho CRM** — auto-create call activities under the matching Lead/Contact.
- **HubSpot** — log calls onto contacts, fire workflow triggers.
- **Salesforce** — create Task records with full transcript & recording link.
- **Custom REST** — bring-your-own field mapping.

□ **Event payload (webhook)**

Every event you opt-in to ships with: `callId, customerId, status, duration, transcript[], intents[], sentiment, recordingUrl, disposition`.

Reports — analytics & exports

The numbers that prove ROI: connect rate, talk time, intent breakdown, agent uptime, cost per outcome.

Figure 12.1 — Reports page with date filters & export.

Available report cards

Report	Why it matters
Connect rate	What % of dialled numbers actually answered.

Report	Why it matters
Average handling time	How efficient your scripts are.
Intent distribution	What customers actually say — drives script tuning.
Outcome breakdown	Paid / promised / refused / wrong-number etc.
Hour-of-day heatmap	Best time to call — pick your future schedules.
Cost per successful outcome	True unit economics, not just "cost per call".

Billing — credits & subscription

See remaining credits, top up, view invoices and manage your subscription plan.

Transaction History

DATE	TYPE	MINUTES	AMOUNT	DESCRIPTION
No transactions yet				

Figure 13.1 — Billing page.

How credits work

- Credits are denominated in **minutes of connected talk time**.
- A 30-second call burns 0.5 credits; a 90-second call burns 1.5.
- Credits never expire on Enterprise plans.

- You'll receive an email at 20% remaining and another at 5%.

Topping up

- 1 Click **Top up credits** on the billing page.
- 2 Pick a pack (₹5,000 / ₹25,000 / ₹1L / custom).
- 3 Pay via UPI, card or bank transfer (Razorpay).
- 4 Credits are applied within 30 seconds of payment confirmation.

Users — team & access control

Add or remove team members, assign roles, reset passwords and review login activity. Admin-only page.

Figure 14.1 — Users administration screen.

Role matrix

Capability	Viewer	Admin	Super Admin
View dashboard & reports	☐	☐	☐
Place & listen to calls	☐	☐	☐
Run campaigns	—	☐	☐
Edit templates & workflows	—	☐	☐
Manage users & settings	—	☐	☐

Capability	Viewer	Admin	Super Admin
Manage organizations & plans	—	—	□

Settings — telephony, AI, storage & more

The control room for your organization. Eight tabs let you wire up every external service KuralAI talks to.

Figure 15.1 — Settings → Telephony tab with Twilio credentials.

What each tab covers

Tab	Configure
Telephony	Pick Exotel or Twilio. Enter SID, auth token, phone number, webhook secret.
AI & Voice	Pick the TTS engine (Azure / ElevenLabs / Sarvam), voice ID, speed, pitch.
Payment Gateway	Razorpay keys for credit top-ups.
Storage	S3-compatible bucket for recordings & transcripts.

Tab	Configure
Behaviour	Default agent persona, language, max-call-length, retry rules.
Escalation	Conditions to transfer to a human — keywords, sentiment, customer request.
Inbound	Map incoming calls on your number to a workflow.
API Access	Generate & revoke API keys for the REST API.

Wiring up Twilio (or Exotel)

- 1 Pick **Exotel** or **Twilio** at the top.
- 2 Paste the **Account SID** and **Auth Token** from your provider's console.
- 3 Enter the **phone number** you've purchased (E.164).
- 4 Copy the three webhook URLs at the bottom of the page (Answer / Status / Incoming) and paste them into your provider's console — these tell the carrier where to send call events.
- 5 Click **Save Settings**. Place a test call from *Dynamic Call* to verify.

❏ Credentials are write-only

Once saved, the dashboard never displays your secrets again — it shows  and a "Saved" badge. To rotate, paste a new value.

API Configuration

Manage API keys, rate limits, and webhook subscriptions for programmatic access. Admin-only.

Figure 16.1 — API Config screen.

Generating an API key

- 1 Click + **New Key**, give it a label (e.g. "billing-system-prod").
- 2 Pick a scope — *read-only*, *place calls*, or *full admin*.
- 3 Copy the key shown **once** — we never display it again. Store in your secrets manager.
- 4 Use it in the `Authorization: Bearer <key>` header on every API request.

Common API endpoints

```
POST /api/calls           – place a single call
POST /api/campaigns       – kick off a bulk campaign
GET  /api/calls/:id       – fetch call detail + transcript
GET  /api/customers       – list customers
POST /api/customers       – add a customer
GET  /api/reports/summary – aggregate stats
```

Platform Overview

The super admin's home page — the health of every organization on the platform at a glance.

Figure 17.1 — Super Admin Dashboard.

The five top-line numbers

- **Organizations** — total tenants, active vs paused.
- **Total Users** — across every org.
- **Total Calls** — platform-wide all-time count.
- **Minutes Used** — total connected talk time burnt.
- **Revenue** — sum of all paid invoices.

Below the KPI strip is the **Organizations** table with quick links to each tenant's plan, credit balance and active/inactive status. Click **Manage Organizations** to drill in.

Organizations — manage all tenants

Create new tenants, edit branding, suspend abusers, top up credits, change plans.

Figure 18.1 — Organization list with plan, users, credits.

Creating a new organization

- 1 Click **+ New Organization**.
- 2 Enter the company name and a unique **slug** (used in subdomains and URLs).
- 3 Pick a **plan** — Free, Starter, Growth, Enterprise.
- 4 Optionally, seed an **initial admin** by entering their email — they'll receive a welcome email.
- 5 Click **Create**. The org is live immediately.

Per-organization actions

- **Edit** — name, branding, plan, custom domain.
- **Top up** credits manually (e.g. for a comp).
- **Suspend** — freezes outbound calling without deleting data.
- **Impersonate** — log in as that org's admin (for support).
- **Delete** — permanent. Requires typing the org slug to confirm.

Plan Management — pricing tiers

Define the subscription plans every tenant can pick from — included credits, per-minute rate, feature flags.

Plan Management
Create and manage subscription plans

Figure 19.1 — Plan Management.

Each plan controls

Field	Effect
Monthly fee	Recurring charge billed via Razorpay.
Included minutes	Free credits given each cycle.
Per-minute rate	Cost per minute beyond the included pool.

Field	Effect
Concurrent call limit	How many parallel dials a tenant on this plan may run.
Engines allowed	e.g. ElevenLabs only on Growth+.
SLA & support	Response time tier shown to the customer.

Usage & Analytics

Cross-tenant usage telemetry — minutes per org, engine mix, peak concurrency, error rates.

Figure 20.1 — Usage analytics.

Why this matters

- Spot tenants outgrowing their plan — upsell opportunity.
- Spot underused tenants — churn risk to address proactively.
- Tune infrastructure capacity for peak concurrent call windows.
- Track which AI engine is being chosen most often — drives vendor negotiation.

Revenue & Billing

Platform-wide MRR, invoice ledger, refund tracking, and per-tenant payment status.

Figure 21.1 — Revenue overview.

What you'll find

- **MRR** — total monthly recurring revenue, growth %.
- **Top customers** — by lifetime revenue.
- **Failed payments** — needs attention queue.
- **Refunds** issued in the period.
- **Invoice ledger** — every line item, downloadable as PDF.

Common workflows & recipes

Five end-to-end playbooks copy-pasted from real customer onboardings.

Recipe 1 · Daily collections at 10:00 AM

- 1 In *Templates*, copy "Due Reminder — Tamil" and tweak the tone.
- 2 In *Customers*, create a saved segment **Overdue > 7 days**.
- 3 In *Campaigns*, schedule a recurring campaign every weekday 10:00 AM IST against that segment, concurrency 20.
- 4 In *Settings* → *Escalation*, add a rule "transfer if customer asks for human or sentiment < 0.3".
- 5 In *Reports*, save the *Outcome Breakdown* view to your morning bookmark.

Recipe 2 · One-time event reminder blast

- 1 Upload the attendee CSV via *Customers* → *Import*.
- 2 Create a fresh template "Event Reminder — <event name>".
- 3 Run a one-shot *Campaign* with concurrency 50 the evening before.
- 4 Export the CSV from *All Calls* the next day to mark attendance pre-knowledge.

Recipe 3 · Inbound IVR replacement

- 1 Build a *Workflow* with a Speak → Listen → Branch tree (e.g. "press 1 for sales").
- 2 In *Settings* → *Inbound*, map your purchased phone number to that workflow.

3

Hand out the number on your website and marketing collateral.

Recipe 4 • CRM auto-logging

1

In *CRM Integration*, add a generic webhook pointing to your CRM's "create activity" endpoint.

2

Subscribe to the `call.completed` event.

3

Within 24 hours your AEs will see every AI call as a logged activity in their CRM.

Recipe 5 • A/B testing two scripts

1

Clone your main template, rename to "...v2".

2

Split your customer list 50/50 into two segments.

3

Launch two parallel campaigns, one per template/segment.

4

Compare connect rate & outcome breakdown in *Reports*.

Troubleshooting

Quick fixes for the situations our support team sees most.

Symptom	Likely cause	Fix
"Login failed" repeatedly	Wrong password, or account suspended	Ask your admin to reset, or check <i>Users</i> for status.
Calls fail instantly	Telephony credentials invalid or webhook URL not reachable	Re-paste creds in <i>Settings</i> → <i>Telephony</i> , confirm webhook URLs in provider console.
Audio sounds robotic	Falling back to default TTS because primary engine returned an error	Check ElevenLabs/Sarvam API key in <i>Settings</i> → <i>AI & Voice</i> .
Campaign stuck at "Running"	Out of credits	Top up in <i>Billing</i> ; the campaign auto-resumes.
Tamil renders as boxes □□□	Browser missing Indic fonts	Update Chrome/Edge or install the Noto Sans Tamil font.
Webhook fires twice	Provider retried because we returned 5xx — handle idempotently	De-dupe by <code>callId</code> on your side.
Recording missing	S3 bucket policy or wrong region	Verify creds in <i>Settings</i> → <i>Storage</i> and re-test.
Live transcript is blank	Browser blocked WebSocket connection (corp firewall)	Allow <code>wss://kuralai.automystics.tech</code> outbound on port 443.

Need deeper logs?

Open any individual call's detail page — the *Diagnostics* tab shows the full session timeline including TTS/STT timings, websocket events and provider response codes.

Glossary & support

Acronyms in the dashboard, defined.

Term	Meaning
சமுத்ரா (Samuthra)	The default name & persona of the KuralAI Tamil voice agent.
Engine	The conversational AI used during a call: KuralAI Scripted, ElevenLabs, or Sarvam.ai.
TTS	Text-to-Speech — turns the agent's lines into audio.
STT	Speech-to-Text — turns the customer's voice into text the engine can reason about.
Disposition	The final outcome of a call (paid, promised, refused, no-answer, wrong-number...).
Concurrency	Number of simultaneous outbound dials.
Credit	1 minute of connected talk time.
Webhook	A URL on your server that we POST events to.
SID	Telephony provider's unique ID for a call (Twilio "CA...", Exotel call_sid).
Escalation	Mid-call hand-off from the AI agent to a human.
Tenant	One organization on the platform — fully isolated data & users.
